Professional Summary

Computer Science and Engineering (CSE) graduate with hands-on experience in designing, building, and deploying Generative AI, Automation, Machine learning and NLP solutions for real-world applications. Proficient in Python, FastAPI, LLM integration, Retrieval-Augmented Generation (RAG), Vector databases and API-driven system development. Experienced in developing AI Automation, multimodal AI applications and scalable backend services with a strong focus on delivering reliable and production-ready AI solutions.

Technical Skills

- **Programming:** Python (Advanced), SQL, Java,
- **Generative AI & LLM:** Retrieval-Augmented Generation (RAG), LLM Integration, LangChain, Hugging Face Hub, Inference Client, Prompt Engineering, Vector Databases (FAISS), Sentence Transformers, Model Fine Tuning
- **AI Automation :** N8N, Business Process Automation, CRM Automation, Lead Intelligence Systems, SEO Content Automation API Integrations, Email Automation, Social Media Automation
- **Machine Learning:** Supervised & Unsupervised Learning, Regression, Classification, Random Forest, SVM, XGBoost, Model Optimization, Cross-Validation, Feature Engineering, Model Evaluation Metrics, Hyperparameter Tuning
- **NLP:** Tokenization, Stemming, Lemmatization, TF-IDF, Bag of Words (BoW), Named Entity Recognition, POS Tagging, Text Classification
- **Backend & AI Service Development:** FastAPI, RESTful APIs, Model Inference Pipelines, API-based LLM Deployment, MySQL
- **Deployment & Tools:** VSCode, Jupyter Notebook, Google Colab, Git, GitHub, Docker, Hugging Face Spaces, Render Deployment,

Professional Experience

AI Engineer

Betopia

March 2026 – Present

- Designed, developed, and delivered AI-powered automation solutions for real-world business operations and client requirements.
- Developed intelligent automation workflows using n8n, CRM integrations, reporting automation, and lead intelligence systems to reduce manual workload and improve operational efficiency.
- Successfully designed 5+ AI Automation projects and delivered to client for business process automation solutions.
- Currently Building LLM-powered applications using RAG architectures, vector databases, semantic search, and API integrations.

Also I developed 10+ AI projects during academic and professional training, including RAG systems, Multimodal AI Systems, recommendation systems, NLP applications.

Projects

- **Medico AI 2.0 — Multimodal LLM Medical Assistant** [↗](#)

Built a multimodal AI medical assistant combining computer vision, speech recognition, and large language models (LLMs). Integrated Groq Llama 4 Scout, Whisper Large V3, and TTS systems to enable medical image analysis, voice-based consultations, symptom assessment, and intelligent healthcare assistance.

- **Mini AI Assistant** [↗](#)

Built a production-ready AI assistant with persistent conversation memory, intelligent tool routing, Retrieval-Augmented Generation (RAG), and FAISS-powered semantic search. Designed a modular FastAPI backend supporting configurable OpenAI, Gemini, Groq, and Hugging Face LLM integration for context-aware document intelligence.

- **Medico AI – RAG-based Medical Assistant** [↗](#)

Developed a professional medical assistant using Retrieval-Augmented Generation (RAG) architecture. Implemented FAISS for efficient vector similarity search and integrated Hugging Face's Zephyr-7B LLM via Inference Client for precise medical query handling. Built a real-time streaming chat interface using Streamlit and Docker containerization for deployment on Hugging Face Spaces. Features include context-aware answering and source document referencing.

- **AI-Powered-Social-Media-Automation-System** [↗](#)

Developed a fully autonomous n8n automation pipeline that runs daily at 6 AM, retrieves products from Google Drive, generates AI images using Nano Banana, creates cinematic short videos with Veo 3.1, and produces platform-specific captions via GPT-4o. The system automatically cross-posts to Facebook and Instagram, logs all activities, and sends status reports via email—requiring zero human intervention.

- **AI-Powered Email Automation & Lead Intelligence System** [↗](#)

Developed a fully autonomous AI-driven email intelligence system that reads, understands, and responds to emails in real time. The system intelligently routes conversations, scores leads, integrates with HubSpot CRM, and logs data—significantly reducing manual workload and accelerating response times.

- **Content-Based Movie Recommendation System (FastAPI)** [↗](#)

Built a content-based recommendation system that suggests **top-5 similar movies** based on textual similarity of movie metadata. Used TF-IDF vectorization and cosine similarity to compute relevance scores. Exposed the recommendation logic through a FastAPI backend and deployed on Hugging Face to enable public API-based inference.

- **Sentiment Analysis on IMDB Movie Reviews** [↗](#)

Developed an end-to-end NLP pipeline involving text cleaning and TF-IDF vectorization. Trained a Multinomial Naive Bayes classifier achieving **90% + accuracy**. Deployed on Hugging Face.

Soft Skills

Analytical Thinking, Attention to Detail, Time Management, Adaptability, Research-Oriented Mindset,

Education

B.Sc. in Computer Science and Engineering

Daffodil International University (2022 - 2025)

Certifications

- Python with Machine Learning – Creative IT Institute (A+ Grade)
- AI + Prompt Engineering – Microsoft

Languages

Bangla – Native

English – Mid Level

Hindi – Conversational
